

**How we improve it?**

The proposed fintech risk management solutions will be dynamically improved by two further levels of knowledge exchange:

- i) research workshops, in which we review the state of the art of existing knowledge about risk management models, arising from the applications to finance of big data analytics, artificial intelligence and blockchain technology, and propose new solutions, based on the research activity of all partners of the project;
- ii) platform evaluation, which will be run continuously, from the feedback of each training activity, and from the results of the validation laboratory established with European banks.

**MEET THE EXECUTIVE BOARD**

University of Pavia Global Project Coordinations	University College London Work Package Leader (Big Data Analytics Research)	Pantheon-Sorbonne University Work Package Leader (Blockchain Research)	Firamis GmbH Work Package Leader (Dissemination and Coding)	B Hive FinTechs Coordinator	Humboldt University of Berlin Work Package Leader (AI Research)
---	--	---	--	--------------------------------	--

**Cross-border Networking of Ecosystems**

While innovation in finance is not a new concept, the focus on technological innovations and its pace have increased significantly. FinTech solutions that make use of big data analytics, artificial intelligence and blockchain technologies are currently introduced at an unprecedented rate. These new technologies are changing the nature of the financial industry, creating many opportunities for fintechs to offer more inclusive access to financial services.
